Meeting Minutes

Meeting organized by	Paolo Calafiura	**Participants**	Andrea Cavalli, Charles Leggett, Julien Poffet, Yushu Yao
Date	August 12, 2008	**Office**	50B-3215

Subjects

- CernVM allows to upgrade the state of the virtual machine to a new Atlas release. To restore an old state of a VM, it may be necessary to downgrade the software to an old release. We have to check if CernVM allows that.

- During the next days, we have to discuss about the functionalities and the interface that Virtual Machine Logbook must offer to the user.

- We will probably develop VML by supporting Xen, VMware and Virtual Box. Virtual Box can read the VMware image files, so basically we have to work with two different image files (VMware and Xen).

- The web interface used by CernVM inside the virtual machines runs in the lighttpd web server. The web interface of VML will probably run in this server too.
